

BOEING® CALC

The Power Spreadsheet

Local Area Network Version

Tighten the weave in your corporate fabric...

Boeing CALC, the power spreadsheet for Local Area Networks...

To make the most of your spreadsheet information.

First, Boeing® CALC gave you the three-dimensional, multimegabyte spreadsheet, making it possible to store all of your financial information in a single file.

Boeing CALC now enables you to make the most of its 32 megabyte capacity by allowing many users to work in the same spreadsheet. The Boeing CALC LAN version can support up to 32 users, working in the same spreadsheet simultaneously. Without traffic jams. Without compromising data security. And you make the most of your software dollar: *A single LAN package will support eight nodes, at a cost of less than one hundred dollars per node.*

■ **Share files, share the information handling task.**

You can divide the spreadsheet to reflect the way your company functions, assigning cell ranges or pages to various entities within the organization. Even a company with multiple divisions or products can handle data without confusion or delay. And because all of your information is stored in a single file, you can consolidate, summarize, and analyze information easily.

■ **Protect data integrity, keep confidential data safe.**

While you optimize data integrity by storing all inter-related information in a single file, the system gives you a range of security measures designed to keep sensitive information secure.

■ **Save time, improve efficiency, reduce software costs.**

When each organization in a company

keeps an isolated spreadsheet, the drawbacks are self-evident: no consistency, inadequate communication, duplication of effort. And when it's time to merge data for consolidations, summaries, or analyses, it takes a programmer to do it. With the Boeing CALC LAN, you can standardize inputs if you need to. Share information. Avoid duplication of effort. And because you store all of your information in a single workpad, you can incorporate data from different organizations without difficulty.

Highlights

Boeing CALC is designed for effective multiuser spreadsheet management:

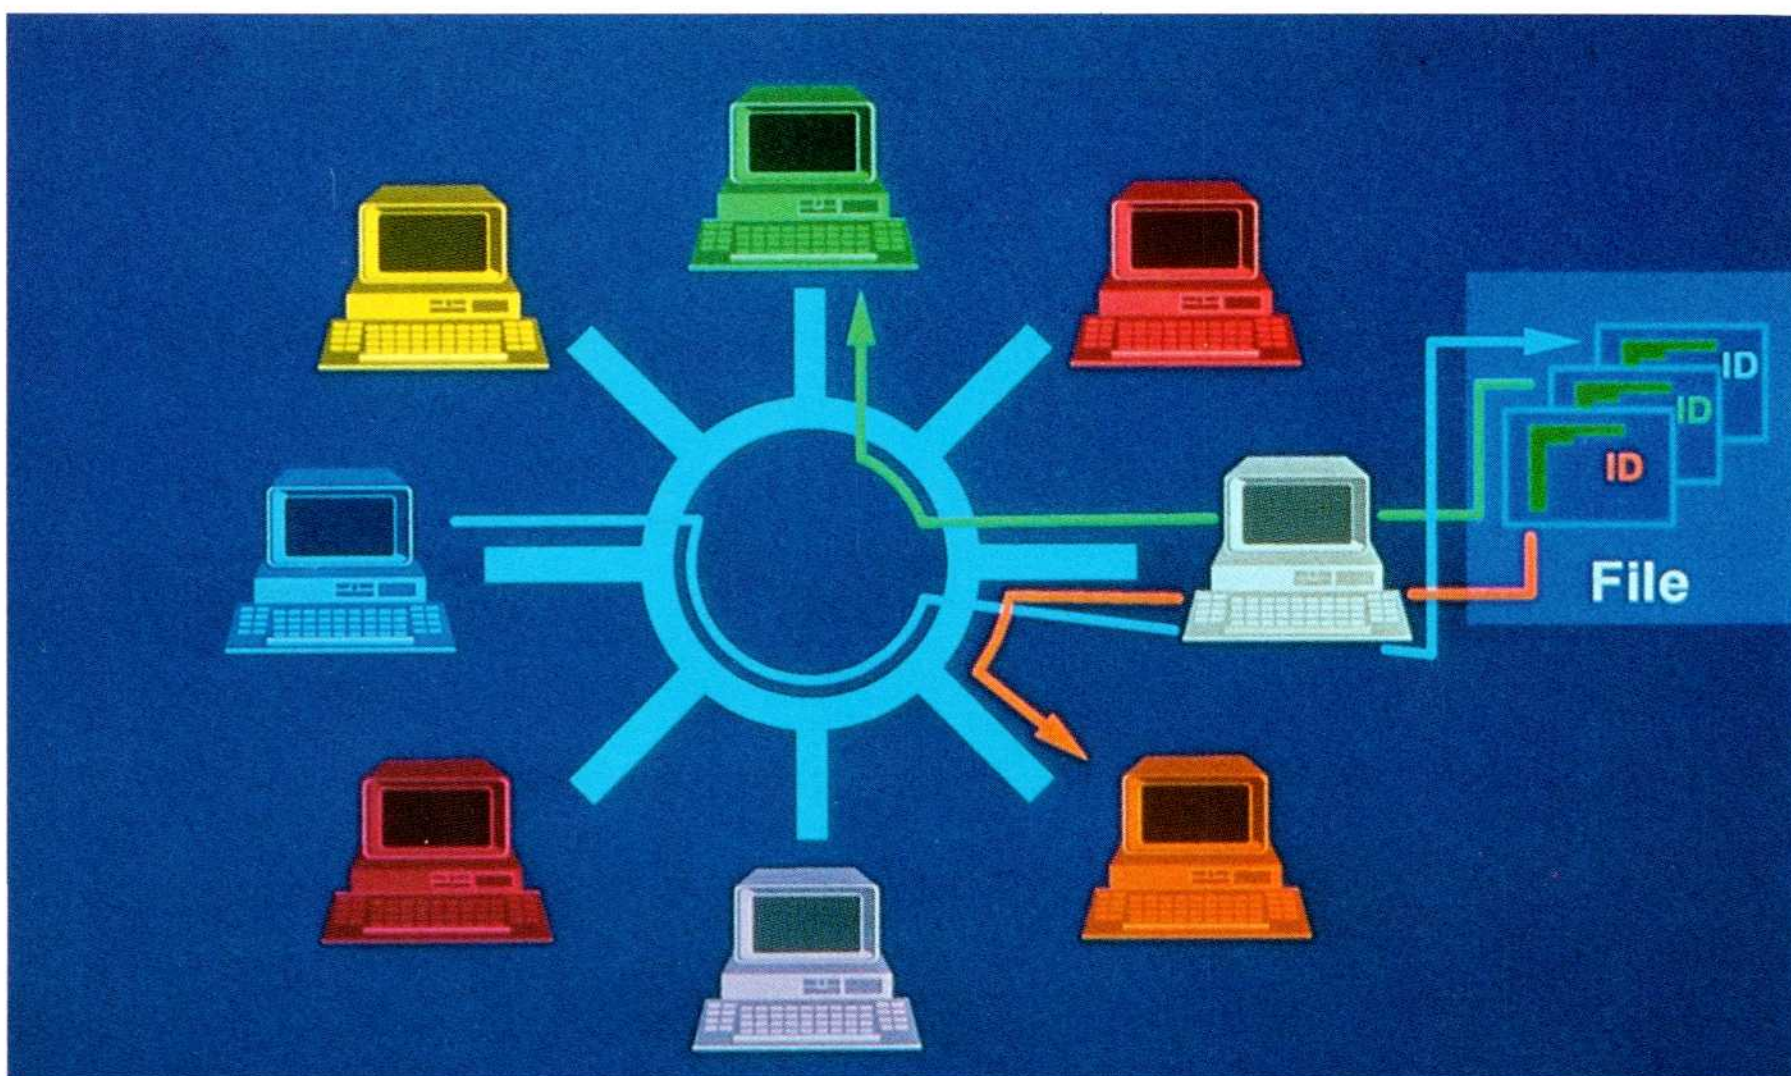

■ **Multiple user access.**

Multiple users work in the same files, pooling common information. And for maximum efficiency, users in "read" mode can even access the same cell ranges simultaneously.

■ **Data security.**

Boeing CALC provides a wide range of security measures to protect data integrity:

- an "Exclusive" file-type which can be accessed only by a single user. Ideal for payroll and other very sensitive information.
- data security down to the cell level
- access to pages or ranges controlled by spreadsheet administrator
- various levels of access permission: from full control of the entire spreadsheet to update privilege on a cell range to total lockout from a range
- restricted entry to the access control page to prevent compromise of security measures

■ File-types for every requirement.

The system administrator can establish the file-type for each workpad, matching task and security requirements. Three types are available:

- Exclusive: for access by one user at a time
- Shared-file: several users working in selected ranges of a single workpad
- Checkout files: users check cell ranges out of a master workpad for updating on a local PC then check them back into master when finished

■ Easy to learn and use.

Users familiar with LOTUS 1-2-3® will recognize the system's command structure and adapt readily to Boeing CALC:

- The two-tiered menus are very similar to LOTUS
- Boeing CALC reads and writes LOTUS workfiles and ASCII and DIF files
- LAN commands are incorporated into the command structure.

Specified Operating Environments

Boeing CALC for the LAN will operate on the IBM PC/XT, PC/AT, and hard-disk compatibles with the following:

- 512K of RAM
- PC DOS or MS DOS 3.XX or above
- IBM Token Ring, PC Network, or compatible hardware
- Novell NetWare 2.0A or PC Network software, with NETBIOS option installed

Education

In addition to a complete set of written instructions, Boeing CALC is delivered with a tutorial diskette that shows how to construct a multipage spreadsheet, step by step. The system also features context-sensitive help for each command.

Warranty

Benefits of the Boeing CALC warranty include provisions for replacement of any defective media for 30 days after delivery and are fully described in the software license agreement.

Program Services

Program services available to Boeing CALC users include telephone consultation and new releases of the software at no cost for 90 days after delivery of the software. Additional program services (and costs, where applicable) are fully described in the software license agreements.

Basic Material

Each Boeing CALC LAN package, which will support up to eight nodes, consists of:

- Double-sided, double-density diskettes containing the Boeing CALC object code and a tutorial
- The Boeing CALC User's Manual
- The Boeing CALC command reference card

Ordering Information

To order Boeing CALC or to obtain further information, contact your local authorized Boeing Computer Services software Dealer.

To locate your authorized dealer (if not identified above), call 1-800-551-0800, ext. 12. (Outside the U.S. and Canada, call (206) 865-5000, ext. 12). Or write:
